

vSearch 2.x (Server)

Article ID: KB109002
Last Modified: 10 July 2013

How to modify user access to vSearch

Product

vSearch 2.x

Summary

User access is controlled by Windows Authentication Access Control Groups

Solution

To add or remove user access to the vSearch Admins application:

1. Logon to a domain controller that has access to *Active Directory Users and Computers*
2. Click *Start, All Programs, Administrative Tools, Active Directory Users and Computers*
3. Select the *Users* container and find vSearch_Admins
4. Double click the group and add or remove users or groups as required
5. The user will need to log off and on again for the change to take effect

To add or remove user access to the vSearch Intranet application:

1. Logon to a domain controller that has access to *Active Directory Users and Computers*
2. Click *Start, All Programs, Administrative Tools, Active Directory Users and Computers*
3. Select the *Users* container and find vSearch_Users
4. Double click the group and add or remove users or groups as required
